EDUCATION

Northeastern University

Sept. 2025 – Dec. 2026 (Expected), GPA: 4.0

Master of Science in Computer Science

Boston, MA

- **Coursework:** Algorithms, Web Development, Fundamentals of AI, Game Engines, Mobile App Development

Tufts University

Sept. 2021 – May 2025, GPA: 3.98

BS in Computer Science and Cognitive and Brain Science

Medford, MA

- **Coursework:** Algorithms, Data Structures, Software Engineering, Computation Theory, Human Computer Interaction

SKILLS

Languages : Python, C++, Java, JavaScript, Kotlin, SQL, HTML/CSS

Frameworks and Libraries : React.js, Next.js, Node.js, Pandas

Engines : Unreal Engine 5, Godot Engine, ECS-based engines

Tools : Git, PowerShell, Firebase, MongoDB

EXPERIENCE

Sierentz North America LLC

June 2024 – August 2024

Data Analyst Intern

Wilton, CT

- Built Python and SQL pipelines to scrape, clean, and load energy data into a database, replacing manual data entry and enabling faster reporting
- Automated report generation with Python (Pandas), converting raw data into presentable graphs/PDFs and cutting turnaround time
- Developed and deployed an internal OpenAI-powered chatbot to assist with summarizing data, improving workplace efficiency and security

Evolv Technologies

June 2023 – August 2023

Cybersecurity/IT Specialist Intern

Waltham, MA

- Managed Active Directory user accounts, permissions, and group policies to support day-to-day IT operations
- Resolved employee IT tickets covering hardware repair, network connectivity, and account access issues

PROJECTS

Hatchbit - Published iOS App

- Built and shipped Hatchbit, an iOS habit-tracking app with a partner, using React Native and Firebase, where users hatch and collect pixel-art creatures as a motivation mechanic
- Published on the App Store, migrating from a native Kotlin/Android prototype to a cross-platform React Native app

Custom C++ Game Engine + Pac-Man Remake

- Designed and built an ECS-based game engine from scratch in C++, implementing a Pac-Man remake with AI-driven enemy movement, sprite/animation systems, and progressive difficulty levels

Google Calendar Implementation, [GitHub Link](#)

- Recreated core Google Calendar functionality in Java using MVC architecture with Command and Builder design patterns, including a full GUI, multi-calendar support, and recurring event editing

Goodreads Website, [GitHub Link](#): [Frontend](#) · [Backend](#)

- Built a full-stack Goodreads.com clone with 2 teammates using React, Node.js/Express, and MongoDB, deployed on Vercel and Render
- Implemented user auth, book search via the Google Books API, shelving/reviews, author account claiming, and an admin panel for content moderation
